

Position: Data Engineer

Date Posted: June 2018

Ticoon Technology is the leading insurance and financial services data consolidator in Canada. Our platform is used daily by tens of thousands of users reviewing data aggregated from multiple sources to provide a consolidated view of their investments, insurance and banking information. We are looking for a new Data Engineer who will be responsible for the ETL, development and design of new features, support of Oracle databases and support for production and testing environments.

Responsibilities:

- Work closely with Business Analysts to validate the technical impact to solutions and the overall Ticoon platform.
- Provide development estimations for projects and participate and/or present reviews of the technical aspects of a project.
- Turn business requirements and high level technical specifications into quality software while adhering to industry best practices and patterns
- Validate new software using unit tests
- Provide operational support to maintain production databases (e.g.backup/recovery, tuning,etc)
- Provide development and design support of Oracle databases to development teams involved in application development, testing and implementation.
- Prepare status reports to accurately communicate progress; provide early notification of problems that could affect schedules, or the integrity or availability of data.

Qualifications:

- Successful candidates will have a College/University education
- Initiative and self-motivation is a must, ability to work with minimal direction
- A thorough understanding of the full development life-cycle and familiar with various development methodologies
- Familiar with development environments, including debugging tools, source control and data synchronization software
- Ability to work evenings and weekends as needed to support products
- Experience in at least one of the Financial Services industries (Banking, Insurance, Securities) is a must.
- Nice to have some knowledge of cloud computing technologies (Amazon AWS, etc.)

Experience:

Experience with:

- Various data sources including structured and semi-structured data (csv, XML, etc.)
- Oracle database PL/SQL development, other RDBMS like MariaDB, NoSQL (Cassandra, etc.)
- ETL and reporting tools (e.g. Pentaho, Informatica, Micro strategy, etc)
- Java platforms and middleware (e.g. Java programming, Spring, JDBC, Jboss, Weblogic, etc)
- Linux Operating systems. Some Oracle DBA experience including: performance, integrity and security of a database.
- Handling Large RDBMS
- A data modeling tools
- Programming experience and scripting skills (Shell, etc.)
- Team Collaboration tools like Confluence, Jira, etc.

Compensation & Other:

- An industry-competitive rate based on your experience and qualifications
- Benefits package
- Flexible hours and working location (working remotely available)

If you are ready to work hard, have a lot of fun, want to help reshape the insurance industry and you have the qualifications outlined above, please send your resume with a cover letter to info@ticoon.com.
